

# Your baby has been prescribed **SYNAGIS**

To help prevent severe RSV disease

**SYNAGIS IS AN INJECTION OF VIRUS-FIGHTING ANTIBODIES  
GIVEN MONTHLY DURING THE RSV SEASON**

RSV is a seasonal virus, like the flu, that is easily spread

Most children get RSV by age 2, but you should know that for babies with certain health conditions, RSV can be very serious

***It's important that your baby gets the medicine he or she needs***

## Here's what happens next—and what you need to do:

- The doctor's office is working to get your baby's SYNAGIS prescription approved  
**Helpful Hint:** Make sure your baby's doctor has the correct insurance information
- Once coverage is confirmed, your baby's prescription may be transferred to a Specialty Pharmacy\*

**ACTION  
STEP**

**YOUR APPROVAL IS NEEDED** for SYNAGIS to be shipped to your baby's doctor. You will receive a call from the Specialty Pharmacy to confirm shipment and any required payment

**Helpful Hint:** You must answer this call  
(This call will most likely come from a 1-800-number)

- Once the Specialty Pharmacy has received your approval and any required payment, the SYNAGIS dose will be shipped to your physician's office (or other designated location)

**ACTION  
STEP**

It is important that you **SCHEDULE DOSING APPOINTMENTS** with your baby's doctor (every 28-30 days)

**Helpful Hint:** Try to schedule all 5 SYNAGIS appointments in advance

All imagery is for illustrative purposes only.

RSV=respiratory syncytial virus.

\*A Specialty Pharmacy provides medications used to treat rare or complex conditions. Many times, these medications require a physician to administer the medication, have special delivery/shipment requirements, and require specific instructions from a pharmacist.

## IMPORTANT SAFETY INFORMATION

### Who should not receive SYNAGIS?

Children should not receive SYNAGIS if they have ever had a severe allergic reaction to it. Signs and symptoms of a severe allergic reaction could include itchy rash; swelling of the face; difficulty swallowing; difficulty breathing; bluish color of the skin; muscle weakness or floppiness; and/or unresponsiveness. If your child has any of these signs or symptoms of a severe allergic reaction after getting SYNAGIS, call your child's healthcare provider or get medical help right away.

Please see additional Important Safety Information and full Prescribing Information, including Patient Information.

Talk to your doctor's office or Specialty Pharmacy

Your doctor or Specialty Pharmacy can enroll you in this program

OR

Enroll in the SYNAGIS Copay Program

Visit **SYNAGIS CONNECT™**

Eligibility requirements apply.\*

**SYNAGIS CONNECT™** is a patient support program created by Sobi to provide individualized support to help appropriate patients get access to SYNAGIS.

You can get assistance with out-of-pocket costs, understanding your insurance coverage for SYNAGIS, and support resources.

If you have any questions or for additional assistance, call **SYNAGIS CONNECT™** at 1-833-SYNAGIS (1-833-796-2447), Monday through Friday from 8:00 AM to 8:00 PM EST.

You will also find more information about protecting your baby with SYNAGIS on **SYNAGIS.com**

\*Patient must be a resident of the US or Puerto Rico. Patient must be commercially insured. There are no income requirements to participate in the program. Patient is not enrolled in any government, state, or federally funded prescription program, including Medicare, Medicaid, Medigap, VA, DOD, or Tricare.

## IMPORTANT SAFETY INFORMATION (continued)

### How is SYNAGIS given?

SYNAGIS is given as a monthly injection, usually in the thigh (leg) muscle, by your child's healthcare provider. If your child has a problem with bleeding or bruises easily, an injection could cause a problem. Your child should receive their first injection of SYNAGIS before the RSV season starts, to help protect them before RSV becomes active. RSV season is usually fall through spring, but it may begin earlier or last longer in certain areas. When RSV is most active, your child will need to receive injections of SYNAGIS every 28-30 days to help protect them from severe RSV disease for about a month. Your child should continue to receive monthly injections of SYNAGIS until the end of RSV season. Your child may still get severe RSV disease after receiving SYNAGIS. If your child has an RSV infection, they should continue to get their monthly injections throughout the RSV season to help prevent severe disease from new RSV infections.

The effectiveness of injections of SYNAGIS given less than monthly throughout the RSV season has not been established.

### What are the possible side effects of SYNAGIS?

Serious side effects include severe allergic reactions, which may happen after any injection of SYNAGIS and may be life-threatening or cause death. Call your child's healthcare provider or get medical help right away if your child has any of the signs or symptoms of a serious allergic reaction. See "Who should not receive SYNAGIS?" for more information.

Common side effects of SYNAGIS include fever and rash.

These are not all the possible side effects of SYNAGIS.

### APPROVED USE

SYNAGIS is a prescription medication that is used to help prevent a serious lung disease caused by respiratory syncytial virus (RSV) in children:

- born prematurely (at or before 35 weeks) **and** who are 6 months of age or less at the beginning of RSV season
- who have a chronic lung condition called bronchopulmonary dysplasia (BPD), that needed medical treatment within the last 6 months, **and** who are 24 months of age or less at the beginning of RSV season
- born with certain types of heart disease **and** who are 24 months of age or less at the beginning of RSV season

It is not known if SYNAGIS is safe and effective:

- to *treat* the symptoms of RSV in a child who already has RSV. SYNAGIS is used to help *prevent* RSV disease
- in children who are older than 24 months of age at the start of dosing
